Front end: React, React Native, Redux, Bootstrap, React Three Fiber, responsive design, UI/UX design

Back end & data: Node.js, Express.js, REST APIs, Socket.io, MongoDB Atlas

Cloud: Google Cloud (GCP), Firebase, Firestore, Firebase Authentication, Firebase Hosting

Tools & testing: Git/GitHub, Playwright, Postman, Docker, VS Code, npm, Browser DevTools, Expo, Android Studio

E-commerce: Shopify, Shopify Flow, Marketplace Connect, Intelligems, Finale Inventory, Amazon Seller Central

Design & multimedia: Figma, Adobe Photoshop, Blender, Adobe After Effects, Toon Boom Harmony, Vegas Pro

PROFESSIONAL EXPERIENCE

Web Developer | Partify

Jun 2026 - Sep 2026

Warren, MI | Developed features for US and Canadian Shopify storefronts

- Redesigned responsive product pages and order tracking with vehicle-selection and touch-up paint modals, clearer fitment tables, and progress cards for production, shipping, and pickup. Used Intelligems for A/B testing.
- Extended Node.js backend services to normalize AfterShip tracking data, match Shopify pickup and fulfillment records to order items, and handle paint-production timestamps.
- Connected saved vehicles to an existing Google Cloud Run customer API; isolated Garage and wishlist data by account and rejected stale asynchronous updates.
- Diagnosed and fixed bugs and edge cases in VIN-to-catalog mapping, paint codes, manufacturing-country checks, cart validation, missing VIN order data, and grouped-item deletion.
- Expanded predictive search through the Shopify Storefront API and corrected stock and pricing displays to reflect available product variants.
- Built Shopify Flow workflows that sent Slack alerts for orders needing fitment or color-match review.
- Reviewed and tested teammates' code, gave feedback, and fixed defects; wrote Playwright regression tests. Resolved merge conflicts, released US/Canada updates through Git/GitHub, and checked live orders.
- Audited order and inventory data to identify outliers and guide fixes. Reorganized Amazon Seller Central listings and configured VIN-based customization; prepared bulk title, image, pricing, inventory, handling-time, and shipping updates. Diagnosed and resolved stock-sync issues in Finale.

SELECTED PROJECTS

HeyYou | Real-time location and messaging | Full-Stack Honors | [Project](#)

- Built a React Native app with Google Maps, Socket.io, Node.js, and MongoDB Atlas for group location sharing and messaging. Added access keys and automatic location-data deletion on logout; tested synchronization across devices.

KRISPY | React media platform | [Project](#)

- Built a React site for public-domain films and live streams, using REST APIs, reusable components, and responsive media browsing.

Bard | React Native learning app | Front-End Honors | [Project](#)

- Built a Shakespeare learning app with Firebase authentication, locally loaded play data, quizzes, progress tracking, badges, and completion certificates.

ADDITIONAL EXPERIENCE

Data Entry Specialist (Temporary) | JPMorgan Chase / Adecco

Mar 2025 - May 2025

- Recognized as a top performer while processing high-volume financial documents with 10-key and alphanumeric entry, meeting accuracy and confidentiality requirements.

EDUCATION

Nucamp Coding Bootcamp

Nov 2023 - Jun 2024

Front-End and Full-Stack Web & Mobile Development Certificates; Honors Graduate

Wayne State University

Sep 2015 - May 2018

Bachelor of Fine Arts
